Build on reality with SkyMap

SkyMap Portal is the digital tool that helps you visualize, plan, and execute your construction projects with high accuracy using visualized measurable information. With a digital copy of reality in 2D and 3D, you can compare drawings and models with the actual site, giving you a clear overview and facts rather than guesses.

Efficiency and collaboration

The platform makes it easy to plan, monitor, and document your projects, increasing efficiency and profitability. You can identify errors and issues early, reducing the risk of costly mistakes. The visualization also facilitates collaboration with employees, customers, and suppliers, as you can conduct digital site visits and maintain a shared view of reality.

Improved safety and sustainability

With SkyMap, you get traceability and control over the project's progress. You can quickly spot deviations and adjust resources to keep the project on track. The platform helps improve safety on the construction site and keeps the workplace safety plan up to date. You can ensure efficient resource use and minimize waste, making your project more sustainable.

Digital prototype workshop

Using SkyMap from the planning phase gives you a digital prototype workshop where you can test your ideas before putting them into action. This significantly increases the likeli-

hood of meeting quality, budget, and time constraints in the project.

User-friendly and cost-effective

SkyMap Portal is designed to be an uncomplicated, user-friendly, and cost-effective tool that everyone involved in your construction project can access and benefit from.

SkyMap Portal gives you full control over your construction projects, ensuring efficiency, accuracy, and collaboration while improving both your workflow and the experience for your customers and suppliers. With SkyMap, you can make informed decisions and deliver high-quality results.

With the Multi license, you can gather all information in one place and invite an unlimited number of participants to your project. You'll have access to all features of SkyMap's visualization tool, SkyView, and can add more services as needed. Learn more about what's included in the license at skymap.se.

Learn more about additional services you can also order, such as [SkyMap Design](#), [Cloud Processing](#), [SkyMap Connect](#), and the various On Demand services available in the platform.
